

LONG-TERM AND POST-ACUTE CARE

Long-term and post-acute care (LTPAC) providers are faced with enormous challenges when coordinating care for patients transitioning to and from multiple and diverse care settings. It can be very difficult and time-consuming to gather the correct information about patients before taking over their care. With health information exchange (HIE), LTPAC providers have faster, easier access to patient clinical information to improve care transitions and coordination with other providers.

CORHIO's HIE provides the ability to electronically access patient health information including lab, pathology, and radiology results, orders, patient care summaries, transcription notes, consult reports, ADT information, and more. With HIE, health information is protected and exchanged under strict medical privacy and confidentiality procedures.

CORHIO Health Information Exchange Offers:

- Secure, HIPAA-compliant data exchange with hospitals, labs, physicians, and other care providers
- Streamlined access to patients' medical history, saving valuable time searching through paper charts and faxes or making phone calls
- Decreased costs from faxing, printing, mailing paper files, and other administrative tasks
- Streamlined MDS and OASIS reporting
- More efficient workflow for discharge planners, helping them focus on more complex cases
- Reduced costs and physical risks to patients by avoiding unnecessary duplicate tests

For More Information

To learn how CORHIO can help your organization, please contact us at 720-285-3200 or visit us online at www.corhio.org/for-providers/long-term-care. On this page, you can view a helpful video showing how CORHIO has helped several LTPAC organizations improve care transitions.

CORHIO PARTNERS WITH:

- Assisted living
- Home health
- Hospice
- Long-term acute-care
- Rehabilitation facilities
- Residential care
- Skilled nursing
- Veteran's homes

What CORHIO Participants Are Saying...

"Using CORHIO has helped our workflow immensely, mostly saving time. It's been nothing but positive."

Sheila Powell, Former Senior Director of Community Relations
Tru Community Care

"We now have the ability to view information real-time, which allows us to better prepare for our residents' and guests' arrivals, giving us access to more in-depth health information and treatment history prior to our efforts in helping them in their healing process."

David Tompkins, Director of Clinical Informatics
Christian Living Communities

"...we have been able to quickly obtain data that was missing from our original referrals so our nurses and therapists could have more complete information and provide better care."

Carol Bartley, Division Director
Bayada Home Health Care

"For us to be able to communicate better and partner with the doctors and facilities to exchange that information means we're able to take better care of the patient."

Cathy Kaufman, CEO
Complete Home Health Care

"This is a program that has massively improved not just the workflow of our agency, but also our overall client care and satisfaction. It has saved us precious time and money. I would never go back to not having it."

Alexis Bellinger, RN
Professional Home Health Care

"Where we use it frequently is when one of our residents goes to the hospital – either for an emergency room trip or an in-patient procedure – we are able to keep track of what's happening to them, with them, and be far better prepared for their return."

Pam Devine, Administrator
Frasier Meadows Retirement Community
