

Consolidated Care Summaries

One simplified document that incorporates data from within the CORHIO health information exchange (HIE) for your patient.

To streamline clinical decision-making, CORHIO, a Contexture organization, has launched Consolidated Care Summaries, which transforms disparate data into a single, comprehensive Continuity of Care Document (CCD). Without investing significant effort, busy healthcare providers can now have a single view of all clinical information available for a patient.

Based on the patient or member panel that you provide, CORHIO will identity match against available data in the HIE and collect and collate available clinical data in a 365-day look-back period for each individual patient in your file. We apply data parsing, standardization and de-duplicating to deliver actionable results to you.

Consolidated Care Summaries include:

- Up to 365 days of data in the CORHIO network for specific patients
- Hospital patient data-admission, discharge, transfer data and test results
- Laboratory, pathology and imaging results
- Care summaries and clinical documents from community providers
- Future data that comes into the CORHIO network (e.g., medications, advance directives, social determinants of health) will be included

Use CORHIO Consolidated Care Summaries to:

- Reduce redundancy of health information by viewing one document that encompasses a patient's medical history including what you want to see
- Optimize decision-making by viewing one document instead of searching in several different places
- Improve participation in value-based care and population health initiatives supported by robust health information exchange
- Inform reporting by populating patient's clinical records with more information

Delivered How You Want It

- CORHIO's Consolidated Care Summaries are delivered real-time via Direct Messaging utilizing our Health Information Service Provider (HISP) capabilities.
- We can also build an Application Programming Interface (API) that meets your organization's specifications or work with you on an HL7 feed.

Consolidated Care Summaries

One simplified document that incorporates data from within the CORHIO health information exchange (HIE) for your patient.

Use Cases

As a provider in a large integrated health system using a major EHR system, I need out-of-network ambulatory and encounter data for my next day scheduled visits and contracted patients.

As a care manager in a payer organization, I need to know right away if our high-risk members have been in the hospital, emergency department or some other encounter. I need to get the patient back on track with a primary care provider appointment for a medication review and new care plan.

Consolidated Care Summaries—a single view CCD of all CORHIO data sources, organized to help you find exactly what you're looking for
