

PatientCare 360® is a secure, web-based portal that gives providers access to patient medical histories and clinical results from all of Colorado's major health systems and labs.

Collecting patient information from multiple sources requires significant time and effort. With PatientCare 360, you get a complete view of each patient, including: new patients; patients that haven't been to your practice recently; and patients who've been seen by a specialist, were admitted to the hospital or visited the ER.

Information includes:

- Laboratory and pathology results
- Imaging and radiology (reports and links to images)
- Admit, discharge and transfer (ADT) information
- Transcription and consult reports
- Medication, allergy and problem information
- Care summary documents
- Care Summaries available from nearly 300 community providers

PatientCare 360 provides the latest information to enhance patient care, streamline coordination of care, increase reimbursements from follow-up care and more easily report on quality measures. No faxing, emailing or phone calls required.

Easy to Access

PatientCare 360 is web-based, so implementation does not require extensive IT resources and is easy to learn with hands-on training provided.

Updated Patient Information

CORHIO connects with Colorado's largest hospitals, health systems, numerous practices, labs, ancillary providers and the Department of Defense. The data is updated real-time, giving physician practices the most recent, most accurate patient information.

Actionable Insight

Hospital face sheets are included in patient records and provide the most up-to-date and complete demographic data. Having a complete view of the patient's clinical profile helps physician teams deliver high-quality, coordinate care, reach out to patients who need more assistance, and collect information for quality reporting – all while creating a positive patient experience.

NEW: Community Care Summaries

PatientCare 360 users can now query summaries from providers in the community and retrieve a consolidated 12-month view of encounters.

Quickly Find the Patient Information You Need When and Where You Need It

Having patient information at your fingertips eliminates the need to fax, call, and email multiple sources for medical records – saving valuable time and improving the patient experience.
