

COVID-19 Data Analytics

To help the Colorado healthcare community monitor COVID-19 test results during this crisis, CORHIO is providing an easy-to-use Tableau dashboard.

Features:

- Aggregate and patient data on positive and negative test results from major hospital systems and labs currently performing COVID-19 testing in Colorado (that are participating in the CORHIO network)
- Data updated real-time and available 24/7 via a web-based dashboard in Tableau and secured via HIPAA 2-factor authentication
- Filter your view by what your organization is interested in (for example, by county or by zip code)

Details:

- Five Tableau licenses per entity
- CORHIO implementation fee waived (\$10,000 value) - for eligible organizations only
- Monthly fees waived for three months - for eligible organizations only

Services Available:

Patient Level Dashboard - A detailed patient-level view of COVID-19-specific lab results (for HIPAA covered entities only). Information can be filtered by geographic area, including county, zip code and city, observation date, and patient demographics including gender, age, race & ethnicity.

You can download the information as .csv file for further analysis and sorting. Patient information included in the detailed report: first and last name, DOB, gender, address, phone, zip code, sending facility/patient location, test results, ordering provider, performing lab, observation time and insurance.

Population Health Dashboard - A summary view of COVID-19-specific lab results that can be filtered by geographic area, including county, zip code, and city, observation date, and patient demographics including gender, age, race and ethnicity.
